What are the Top 10 Actions that I Can Take in the Workplace to Prevent the Spread of COVID-19?

- 1. Encourage all employees to get vaccinated. Check out our vaccine info here.
- 2. Allow employees to work from home or outdoors when possible and to stay home if they are not feeling well.
- 3. Limit the number of people (customers and employees) who are inside your business at one time by having customers make appointments.
- 4. Make sure that your business has good ventilation (at least <u>6-12 air exchanges per hour</u>) and that your HVAC system is using filters with MERV13 or higher. Open windows and doors if possible.
- 5. Use other <u>air cleaning equipment</u> such as portable air cleaners or UV lights.
- 6. Install barriers (sneeze guards) where 6 feet distance is not possible
- 7. Only vaccinated people should be indoors without a <u>face mask</u>. As it is difficult to know vaccination status consider requiring customers and other employees to wear a face mask at all times. Have masks available for those who arrive without one.
- 8. Require that employees wash their hands or use hand sanitizer throughout the day. Ask customers to wash or sanitize their hands upon entering the building.
- Cleaning followed by disinfection once daily is best to remove viruses that may be on surfaces. High trafficked areas and regularly touched surfaces should be cleaned and disinfected more frequently.
- 10. <u>Place signs</u> throughout the building reminding everyone to keep their distance, wash their hands, and wear a mask.
